B

## Features & benefits

### NFC Technology Embedded in every Composite Cover

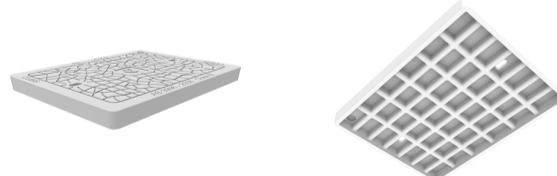

Designed by Infrastructure Products Australian, the team have smartly provided major communication companies with the ability to GEO Map, track maintenance and record pits, offering increased visibility and protection of network assets.

### UV tested, to withstand the harsh Australian elements

Infrastructure Products Australias' composite covers are UV stabilised to ensure they remain robust and slip-resistant even with extended exposure to extreme UV.

### Available in a range of Sizes

Our composite cover comes in a variety of sizes to suit MONObox™ P1 to P9, STAKKAbox™ and Fortress modular pit ranges.

## Full specifications

Material	Composite covers are constructed from a reinforced composite that results in a more robust and withstanding product in comparison to regular concrete covers. They are also lightweight and exceed typical OH&S standards, making them suitable for a one person lift.
----------	--

Load Rating	Composite covers are a Class B load rating (ultimate limit state design of 100kN) under the Australian Standard AS/NZ 3996. This makes our composite covers suitable for private and shared residential property and vehicles accessing driveways.
